# Mayan GOLD

## Overview...

Mayan Gold originated from the foothills of the Andes of Peru where its ancestors were once farmed by the Incas. Mayan Gold is a golden coloured tuber with a nutty flavour proving to be an exceptional variety for chip, crisp and roast manufacturing.

## Breeding & licensing...

**Breeder** James Hutton Institute  
**Parents** SCRI DB270(43) x SCRI DB 220(52) ex Phureja

## Tuber characteristics...

**Smoothness of skin** Smooth  
**Shape of tuber** Very long  
**Depth of eyes** Medium  
**Colour of skin** Blue parti-coloured  
**Colour of flesh** Medium Yellow

## Botanical description...

**Maturity** Maincrop  
**Height of plants** Tall - very tall  
**Frequency of berries** Very many  
**Colour of flower** Red Violet  
**Colour of base of lightsprout** Blue

## Resistance to Damage, Pests and Diseases...

**Black dot** ( Colletotrichum coccodes )  
**Black scurf** ( Rhizoctonia solani )  
**Dry rot** ( Fusarium coeruleum )  
**Dry rot** ( Fusarium sulphureum )  
**Late blight on foliage** ( Phytophthora infestans )  
**Late blight on tubers** ( Phytophthora infestans )  
**Powdery scab** ( Spongospora subterranea )  
**Silver scurf** ( Helminthosporium solani )  
**Skin spot** ( Polyscytalum pustulans )  
**Blackleg** ( Pectobacterium atrosepticum )  
**Common scab** ( Streptomyces scabiei )  
**Potato Cyst Nematode** ( Globodera pallida Pa 2/3, 1 )  
**Potato Cyst Nematode** ( Globodera rostochiensis Ro1 )  
**Potato Leafroll Virus**  
**Potato Virus Yo**  
**Splitting**  
**Bruising**
